

ScrollReader in a nutshell

by Mhortai

One press eats a whole stack. ScrollReader bulk-consumes six scroll types — Wildcard Transmog Scroll, Sealed Traveler's Map, and the Scrolls of Mastery, the Delver, Reach and Bounty — server-side, every bag copy in one go.

How to use it

- **The bar:** six buttons, one per scroll, with live counts. Click one → confirm → the stack is gone. Drag the bar anywhere; /sr bar hides it.
- **Keybinds:** ESC → Key Bindings → ScrollReader. Bind any of the six; a keypress works exactly like a click.
- **Read everything:** the minimap button, the floating scroll button, or /sr — all six types under one confirmation.

Worth knowing

- Every press asks first — these scrolls are destroyed with no undo.
- Maps go 500 per server call and need all your flight paths first; ScrollReader auto-repeats until the bags are clean.
- Nothing works in combat; queued reads resume after.
- /sr count shows what you're holding.
